

WET FIELD CONDITIONS PREPARATIONS LACAMAS LITTLE LEAGUE

How to deal with Wet Field Conditions while preparing the Fields for Play

- 1. If it has been raining, please get to your game early to prepare. Raking the fields will turn the infield mix and dry them out. Try this first before applying ANY drying agent.**
- 2. If there are moist areas (around Home Plate, Mound or Basepaths) apply "Rapid Dry" very sparingly. Work in with rake until area dries sufficiently.**
- 3. Next check around the bases. These areas should be playable simply by raking the area and applying some Rapid Dry. Use the Rapid Dry sparingly as it is very expensive.**
- 4. If the above steps do not prepare the surface for safe play, then the game should be called off.**

**REMEMBER!!!! ALWAYS RAKE THE BASEPATHS LENGTHWISE
AND AVOID PUSHING INFIELD DIRT INTO THE GRASS!!!!**
